Art Unit: 1625

Claims 1-25 are again rejected under 35 U.S.C. 102(b) as being anticipated by Firestone et al for essentially the reasons of record. The aminoquinoline acrylic acid could intramolecularly alkylate because the amino group could react with the acrylic acid double bond.

Claims 1-25 are rejected for the reasons of record under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant's arguments filed 10-2-2006 have been fully considered but they are not persuasive. The terms listed in the previous rejection are unduly functional. For example terms like "self alkylation to generate a non-toxic residue" could not be readily ascertained. How does one know what happens to a chemical in vivo?

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
